

MULTIPHYSICS MODELING IN NANOELECTRONICS

BY

JOHANNES A. RUSSER

Habilitation

Technische Universität München, 2016

Committee:

Professor Paolo Lugli
Professor Aldo di Carlo
Professor Stephen Goodnick

Table of Contents

Chapter 1	Introduction	1
Chapter 2	Nanoelectronics	6
2.1	Future Developments in Nanoelectronics	6
2.2	Silicon Nanoelectronics	7
2.3	Graphene	7
2.4	Carbon Nanotubes	8
2.5	Further Technologies and Devices	10
Chapter 3	Nanoantennas	12
3.1	Introduction	12
3.2	Physical Constraints in Antenna Integration	13
3.3	Monolithic Integrated Antennas, Plasmonic Antennas, CNT and Graphene Antennas	15
3.4	Summary	17
Chapter 4	Thermocouple Terahertz Detector	18
4.1	Introduction	18
4.2	Seebeck Effect Based Thermoelectric Detection	18
4.3	The Thermal Conduction in the Thermocouple Substrate	19
4.4	The Equivalent Circuit of the Thermocouple	21
4.5	Thermal Conduction	22
4.6	Summary	23
Chapter 5	Josephson Devices	25
5.1	Introduction	25
5.2	Superconductivity	25
5.3	The Josephson Effect	26
5.4	Energy Flow in the Ideal Josephson Junction	29
5.4.1	The Energy stored in the Josephson Junction	29
5.4.2	Frequency Conversion in the Josephson Junction	30
5.4.3	General Energy Relations for Josephson Junctions	31
5.5	Quasiparticle and Displacement Currents	32
5.5.1	RF Detection with Josephson Junctions	33
5.6	Examples of Josephson Junctions and Summary	34

Chapter 6	Quantum Circuit Electrodynamics	36
6.1	Introduction	36
6.2	The Foster Multiport Representation	37
6.2.1	The Foster Admittance Multiport Representation	37
6.2.2	The Foster Impedance Multiport Representation	39
6.3	Circuits with Nonlinear Inductors	41
6.3.1	Circuit with a driven Josephson Junction	41
6.4	The Quantization of the Foster Impedance Circuit	42
6.5	Nonlinear Quantum Circuits	43
6.5.1	Quantum Circuits with Nonlinear Inductors	43
6.5.2	The Quantization of a DC-Driven Josephson Circuit	43
6.6	Summary	44
Chapter 7	Discrete Time Modeling	46
7.1	Introduction	46
7.2	State Equation Representation	48
7.3	System Identification	50
7.4	The Connection Circuit	53
7.5	Lumped Element Equivalent Circuits for Reactance Multiports	55
7.6	Lumped Element Equivalent Circuits for Linear Lossy Reciprocal Multiports	57
7.7	Summary	59
Chapter 8	Stochastic Fields	60
8.1	Introduction	60
8.2	Network Oriented Noise Modeling	60
8.3	Scalar Stochastic Fields	61
8.4	Vectorial Stochastic Fields	63
8.5	Numerical Computation and Experimental Characterization of Stochastic Fields	64
8.6	Summary	65
Bibliography		66
Appendix A	List of Own Publications	84
Appendix B	Selected Publications	96
	“Lagrangian and Hamiltonian Formulations for Classical and Quantum Circuits”	97
	“An efficient method for computer aided analysis of noisy electromagnetic fields”	103
	“Modeling of Noisy EM Field Propagation Using Correlation Information”	107
	“Near-field measurement of stochastic electromagnetic fields”	121
	“Discrete-time network and state equation methods applied to computational electromagnetics”	128
	“A Nanostructured Long-Wave Infrared Range Thermocouple Detector”	141
	“High-Speed Antenna-Coupled Terahertz Thermocouple Detectors and Mixers”	150
	“Nanoelectronic RF Josephson Devices”	161
